DRM-KK 75 T

DRM-KK 75-T (Reverse Motion Folding Armrest Mechanism)

DRM-KK 75-T (Reverse Motion Folding Armrest Mechanism) is an innovative adjustment mechanism primarily designed for fully upholstered armrests and, less frequently, for fully upholstered adjustable headrests. Unlike conventional folding mechanisms, this model operates using a reverse movement principle, providing greater flexibility for innovative furniture designs.

DESCRIPTION

The **"T"** designation refers to the mechanism's direction of movement. While most folding mechanisms operate **from the bottom upward**, the **DRM-KK 75-T is specifically engineered to move from the top downward**, making it ideal for unique armrest and headrest designs where conventional mechanisms cannot be used.

Offering multiple adjustment positions through its indexed mechanism, **DRM-KK 75-T** is an ideal solution for contemporary sofas, armchairs and premium upholstered furniture requiring innovative movement, refined ergonomics and advanced design flexibility.
