

DRM-396ALCK-AYKWM

DRM-396ALCK-AYKWM (Low-Leg Compatible Zero Wall Recliner Mechanism)

DRM-396ALCK-AYKWM (Low-Leg Compatible Zero Wall Recliner Mechanism) is a professional powered recliner mechanism designed for recliner chairs, lounge chairs, sectional sofas and contemporary seating systems. A single electric actuator synchronously operates the backrest and footrest, delivering smooth movement and outstanding ergonomic comfort.

DESCRIPTION

Its key advantage is compatibility with **low-profile furniture legs up to 60 mm (6 cm) in height**, making it ideal for modern low-height furniture designs while preserving full powered reclining functionality. The mechanism is suitable for **recliner armchairs, sectional sofas and upholstered seating groups**.

Functionally, it offers the same performance and features as the **DRM-6114YA-ZEROWM** mechanism, with the primary difference being its optimization for furniture with low-profile legs. As an optional feature, the mechanism can also be equipped with an **independently motorized headrest**. In this configuration, a **4-button remote control** is required to operate the backrest, footrest and headrest functions independently.

DRM-396ALCK-AYKWM is available in **Model 3, Model 8 and Model 11** sizes, combining contemporary low-profile furniture design with advanced motorized reclining technology and exceptional comfort.
